

**LABORATORY ACTIVITY NO. 1.3.3****Browsing a Website****Name:** Garcia, Marina Ellise V.**Section:** BSIT-102I**Date:** August 03, 2026

This lab activity guides users through practical exercises to explore the fundamental features of the Microsoft Edge web browser within a **Windows 11 environment**. The lab covers essential Browse functionalities such as navigating to websites, utilizing scroll bars and hyperlinks, and using the back button. It also introduces integrated features like tabbed Browse and the "Hub" menu, which includes Favorites, Reading List, History, and Downloads. Furthermore, the activity demonstrates how to access and configure Microsoft Edge settings, including advanced options. While the original lab might reference older browser technologies, this modified description emphasizes modern Browse with Microsoft Edge and provides guidance on adapting to the Windows 11 interface.

I. OBJECTIVES

Upon completion of this laboratory exercise, students are expected to and meet the following intended learning outcomes:

Activity Objectives	Intended Learning Outcomes		
	ILO1	ILO2	ILO3
1) effectively navigate web pages using essential browser functions such as typing URLs, following hyperlinks, and utilizing navigation buttons (e.g., Back).	•	•	
2) utilize key web browser features, including tabbed Browse, managing favorites and reading lists, and accessing Browse history and downloads.	•	•	•
3) locate and explore web browser settings to understand basic configuration options related to Browse and security.	•	•	•

Where:

ILO1 – Exhibit thorough demonstration of the concept

ILO2 – Being able to perform the activity independently

ILO3 – Design and evaluate emerging IT solutions

II. DISCUSSION

- **Operating System Objectives:** The unit aims to enable learners to distinguish between different types of operating systems (OS) designed for workstations, servers, mobile devices, embedded systems, and virtualization. It also covers identifying commonly used commercial and open-source OS such as Windows, macOS, iOS, Linux, Chrome, and Android, and the basic use of a browser to view websites.
- **Functions of an Operating System:** An OS serves as an interface between the user and the computer (through elements like the shell, Graphical User Interface, and command line) and between applications and hardware (via the kernel and device drivers). It also provides utilities and manages application compatibility, system health, functionality, and data.
- **Types of Operating Systems:**
 - **Workstation OS:** Includes Microsoft Windows, Apple OS X/macOS, Linux, and Chrome OS, used for both enterprise and home clients.
 - **Mobile Device OS:** Primarily Apple iOS and Android, which are often tied to specific hardware.
 - **Server OS:** Examples are Windows Server, Linux, or UNIX, designed for network server applications and client licensing, often operated via a command line.
 - **Embedded OS:** Used in systems that perform specific, time-sensitive tasks with high reliability requirements in static environments, known as Real Time Operating Systems (RTOS).
- **Open Source vs. Commercial OS:**
 - **Commercial OS:** Requires a license purchase and its proprietary code is kept secret by the vendor (e.g., Microsoft Windows, Apple macOS, Apple iOS).
 - **Open Source OS:** Features freely published programming code that can be reused, potentially forming the basis for commercial products (e.g., UNIX, Linux, Android).
- **Firmware:** A type of software closely tied to hardware function (like BIOS and UEFI in PCs), which is not designed for frequent changes. Many components, such as graphics adapters, disk drives, and printers, also contain embedded firmware.
- **Virtualization:** Involves running multiple operating systems (Guest OS/Virtual Machines) concurrently on a single physical computer using a hypervisor.
- **Specific Operating Systems:** The discussions cover detailed aspects of Microsoft Windows (its prevalence, client/server editions, various versions like Windows 10, 8, 7, Vista, XP, and different editions), Apple macOS (exclusive to Apple hardware), Apple iOS (for iPhone and iPad), UNIX, Linux (diverse

distributions and server usage), Chrome OS (for Chromebooks and web applications), and Android (Linux-derived for smartphones/tablets).

- **Windows Management Interfaces:** The unit describes tools for managing Windows, including File Explorer, Windows Settings, Control Panel (for earlier Windows versions and some modern aspects), Ease of Access Options, and Advanced Management Utilities (like the "Power" menu).
- **Using a Web Browser:** The discussions touch upon choosing different web browsers (Microsoft Edge, Internet Explorer, Mozilla Firefox, Google Chrome, Apple Safari) and their common features, such as the address bar and tabbed Browse. It also covers Uniform Resource Locators (URLs), websites, hyperlinks, and various browser controls (Back, Forward, Stop, Refresh, and setting the home page).

III. MATERIALS

A Windows 11 installed computer system.

IV. PROCEDURE

For this activity, you will execute the provided step-by-step instructions. As you complete each step, capture a screenshot of the resulting output or completed action that directly demonstrates successful execution of that instruction. Paste each screenshot into the designated area within your lab document.

Important Considerations:

- **Internet Connection:** An active internet connection is essential to perform most steps in this lab, as it involves Browse live websites.
- **Operating System Focus:** This adaptation specifically aligns the lab with **Windows 11**.
- **Internet Explorer is Absent:** A crucial point for Windows 11 users is that **Internet Explorer is not available** in this operating system. Any steps or considerations that refer to launching, using, or configuring Internet Explorer will not be applicable and should be skipped. The focus should entirely be on Microsoft Edge.
- **Windows 11 User Interface (UI) Differences:** Windows 11 features a redesigned user interface, including a centered Start Menu and Taskbar, and a reorganized Settings app. Users should be prepared to adapt by searching for features within the Windows 11 Start Menu or Settings app.
- **Browser Settings:** The lab encourages exploring browser settings, including advanced options. Users should be mindful of the changes they make in these settings, as they can affect Browse experience and security.
- **Data Integrity:** Be aware that Browse history and downloaded files are tracked by the browser unless "private" or "incognito" mode is used.

Steps:

1. **Start the computer and sign in to Windows 11.** Ensure your desktop is visible.

2. **Launch Microsoft Edge:** Click the Microsoft Edge icon (typically a blue and green swirl) on the Taskbar to open the browser.

3. **Navigate to a Website:** In the address bar at the top of the browser window, type `jru.edu` and press ENTER.

4. Observe that the full URL (e.g., `https://www.jru.edu/`) is displayed in the address bar.

5. **Practice Basic Web Browse:** Spend a couple of minutes exploring the Jose Rizal University website. Try the following:
- Use the scroll bar on the right side of the browser window or your mouse's scroll wheel to view the entire page.

- Click on text or picture hyperlinks to navigate to other pages within the same site.

- c. Use the **Back** arrow button in the top-left corner of the browser window or press the BACKSPACE key on your keyboard to return to previously visited pages.

- d. Follow hyperlinks that lead to pages on different websites.

6. **Use Multiple Tabs:** Click the + icon located next to your current tab to open a new tab. In the address bar of this new tab, type `yahoo.com` and press `ENTER`. This demonstrates how tabbed Browse allows you to view multiple web pages simultaneously within a single browser window.

7. **Explore Browser Features (History, Favorites, Downloads):**
 - a. **History:** Click the three dots ... (Settings and more) icon in the top-right corner of the Edge window, then select **History** from the menu. You can also press `Ctrl + H` on your keyboard. Click on `jr.u.edu` within your history to revisit it.

- b. **Favorites:** To bookmark a page (e.g., comptia.org), click the **star** icon in the address bar. To view your saved favorites, click the three dots ... (Settings and more) icon, then select **Favorites** or press **Ctrl + Shift + O**.

- c. **Downloads:** To view files you have downloaded, click the three dots ... (Settings and more) icon, then select **Downloads** or press **Ctrl + J**.

8. **Close a Tab:** Close the `jru.edu` tab by clicking the x button on the tab itself.

9. **Access Edge Settings:** Click the three dots ... (Settings and more) icon in the top-right corner of the Edge window, then select **Settings**. Explore the various categories listed in the left-hand pane to understand how you can customize Browse behavior, privacy, appearance, and more.

10. **Close Microsoft Edge:** Click the x button in the top-right corner of the Edge window to close the browser. If prompted, confirm to close all tabs.

11. **Shut down your computer.**

V. REFLECTION:

Upon successful completion of "Lab 1.3.3: Browsing a Website," write a comprehensive reflection (between 150-250 words) addressing the following points:

- **Learning Outcomes:** What new knowledge or skills did you acquire or reinforce regarding the Windows user interface?
- **Challenges and Solutions:** Describe any difficulties or unexpected issues you encountered during the lab. How did you overcome them, or what steps would you take to resolve them in the future?
- **Real-world Relevance:** How do the skills and understanding gained in this lab relate to real-world scenarios, either in your personal life or a professional IT context?
- **Critical Thinking:** If you had to use an internet image for any step, explain why you couldn't perform the action physically and how finding the image contributed to your understanding.

This laboratory activity helped me improve my web browsing skills using Microsoft Edge. I learned how to navigate websites, use tabs, manage favorites and history, and explore browser settings. At first, I had a little difficulty finding some features, but I completed the tasks by following the instructions carefully. These skills are useful for research, schoolwork, and everyday internet use. Overall, this activity increased my confidence in using a web browser safely and efficiently.
