

**ITCC103 (IT Fundamentals)
Week 4 Assignment**

Module 1 - Unit 4 & Unit 5 (Managing OS & Troubleshooting and Support)

Name: No Group

Date: August 7, 2026

Subject Code-Section: ITCC103-102I

Name Members Present/Contributed):

1. Chevelle S. Nacionales

1. Based on the different methods for installing applications in Windows 11, such as the Microsoft Store and traditional desktop installers, what are the advantages and disadvantages of each method? In what scenario might a user prefer one over the other?

Answer :

The Microsoft Store is safer and easier to use because apps are verified and updated automatically. Traditional desktop installers offer more software but require manual installation and updates. Users may prefer the Microsoft Store for convenience and desktop installers for programs not available in the Store.

2. Explain the purpose of the Task Manager. How can a user utilize Task Manager to troubleshoot a computer that is running slowly or an application that is not responding?

Answer :

Task Manager helps users monitor running programs and system performance. It can identify applications using too many resources or force close programs that are not responding, helping solve slow performance or frozen apps.

3. Our lesson discusses different types of storage devices, including HDDs, SSDs, and cloud storage. What are the key differences between these storage types in terms of performance and reliability? Which type of storage would you recommend for a primary drive on a new computer and why?

Commented [DEB1]: Replace this with the current module, unit and title.

Answer :

HDDs are cheaper but slower, SSDs are much faster and more reliable, while cloud storage lets users access files online. I recommend an SSD for a new computer because it provides faster startup, quicker loading, and better overall performance.

4. Why is it important to keep the operating system and applications updated? Describe a potential security or performance risk a user might face if they consistently ignore system and application updates.

Answer :

Updates improve security, fix bugs, and enhance performance. Ignoring them can leave a computer vulnerable to malware, security threats, and software compatibility problems.

5. Based on the best practices for file management, what is the importance of creating a logical folder structure and regularly backing up data? Describe a personal or hypothetical experience where following these practices could prevent a significant loss of information.

Answer :

A good folder structure makes files easier to find, while backups protect important data from loss. For example, if a laptop stops working, backed-up school files can be recovered instead of being lost.

6. Our lesson differentiates between the cause, symptom, and consequence of a problem. Choose a common computer issue, such as a slow internet connection or a program that keeps crashing, and explain the difference between the cause, symptom, and consequence in that specific context.

Answer :

If a program keeps crashing, the cause may be corrupted files, the symptom is the program closing unexpectedly, and the consequence is losing unsaved work and being unable to finish tasks.

7. Our lesson outlines several basic troubleshooting steps, including rebooting and checking connections. Describe a time you experienced a computer or device problem and how you used these basic steps (or others) to try and solve it. Did you succeed, and if not, what do you think the next step would have been?

Answer :

I experienced a shutting down itself the computer because I'm playing an emulated game. I restarted the computer and diagnose my ram because it does eat lots of memory. I somehow managed to fix it by configuring my emulator's settings.

8. Our lesson suggests using different sources for technical support, such as built-in help, technical communities, and search engines. Which of these resources do you think is most effective for a beginner, and why? What are the potential drawbacks of relying on community groups for help?

Answer :

Search engines are the most useful for beginners because they provide guides, tutorials, and official solutions. However, community forums may sometimes contain outdated or incorrect advice, so users should verify the information.

9. Our lesson provides tips for optimizing search queries. Imagine you are experiencing a "blue screen" error on your Windows 11 computer with a specific error code. Formulate a search query you would use to find a solution, and explain why each part of your query is important.

Answer :

I would search "Windows 11 blue screen ERROR_CODE fix." Including the operating system, the problem, and the error code makes the search results more accurate and relevant.

10. Based on the principle that "resolving the consequences is often the priority" from a business perspective, explain why a company might prioritize a quick, temporary fix over a more time-consuming, permanent solution for a technical problem. What are the potential long-term risks of this approach?

Answer :

A company may use a temporary fix to restore operations quickly and reduce downtime. However, if the main problem is not fixed, it can lead to repeated issues, higher costs, and security risks in the future.
