

ITC C103
WW2 - M3U2 Midterms Assignment 8

Nacionales, Chevelle S.

Francisco, Sean Gabriel P.

BSIT - 102I

Answers and Questions:

1. How have modern mice and keyboards changed in their connection methods, and what are the advantages over PS/2?

Answer: They connect through USB or wirelessly (Bluetooth or a 2.4 GHz dongle), which is hot-pluggable, universal, and cable-free.

2. Why might transfer speed slow down when both USB drives are active?

Answer: Both drives share the same USB controller's bandwidth, so each gets only part of the speed.

3. What cable would you look for, and why is it preferred over VGA?

Answer: HDMI (or DisplayPort), because it is digital, sharper, supports higher resolutions and refresh rates, and carries audio too.

4. What's the difference between 1400x1050 and 1920x1200, and which is better for movies?

Answer: 1400x1050 is 4:3 and 1920x1200 is 16:10 widescreen, so 1920x1200 is the better choice for movies.

5. Where would you first go to customize a new mouse and keyboard?

Answer: The operating system's mouse/keyboard settings, plus the manufacturer's software for button remapping and shortcuts.

6. What most likely causes the wrong @ symbol?

Answer: The keyboard layout or input language is set to a different region.

7. What mouse would you recommend for competitive gaming, and what is its key feature?

Answer: A wired or 2.4 GHz wireless gaming mouse, whose key feature is a high-precision sensor with high DPI and polling rate for fast, accurate tracking.
